## PROFESSIONAL SUMMARY

Accomplished Tech Lead and Full Stack Software Engineer with over 5 years of experience architecting and scaling high-traffic web and mobile applications. Expert in Java, Spring Boot, React, and TypeScript. Proven track record in leading cross-functional teams, fostering engineering excellence, and delivering business-driven results. Passionate about integrating Generative AI into the software development lifecycle to accelerate prototyping, automate complex tasks, and drive innovation. Committed to building robust architectures and mentoring high-performing engineering squads.

## TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring Boot, Node.js, NestJS, JavaScript, TypeScript, React, React Native, Kotlin, NextJS
- **Architecture & Infrastructure:** Microservices, Micro Frontends, Kubernetes (k8s), RabbitMQ, CI/CD, REST APIs, AWS
- **Observability & DevOps:** Logging, Monitoring, Distributed Tracing
- **Databases:** PostgreSQL, OracleDB, MongoDB, Redis
- **Soft Skills:** Technical Leadership, Developer Mentoring, Stakeholder Communication, Engineering Culture, Architecture Decision-Making

## PROFESSIONAL EXPERIENCE

### **Software Engineer – OneBeat** | *Sep 2026 – Present*

- Working on OneBeat's inventory optimization platform, which helps retailers get the right products to the right stores at the right time.

### **Tech Lead / Full Stack Software Engineer – Livelo** | *Oct 2022 – Aug 2026*

- **Tech Lead (Travel Management Vertical):** Led a team of 4 engineers overseeing critical booking domains for a major loyalty platform with 55+ million users. Scope covered cancellations, ticket policy rules, and post-booking flows for hotels, flights, and car rentals. Responsible for architectural decisions, system reliability, and high-volume scalability.
- **Professional Trajectory:** Advanced rapidly from Junior Mobile Developer (2022) to Software Engineer (2023) and Tech Lead (2025), consistently expanding scope of ownership and architectural responsibility. Key lead for the Hotels vertical backend modernization before assuming oversight of the Travel Management domain.
- **AI-Enhanced Development Strategy:** Architected and implemented AI-driven development workflows using autonomous agents, subagents, and Model Context Protocol (MCP) to streamline feature development. Leveraged AI tools (e.g., Kiro) to bridge internal systems with LLMs, resulting in faster prototyping and improved developer velocity.
- **Impact & Delivery:**
- Co-built the full car rental flow (React Native), driving a 50% increase in car rental sales within months of launch.
- Led frontend modernization of the Hotels booking experience using Micro Frontends (React.js), improving developer autonomy and delivery speed.

- Deepened backend expertise across Java, Spring Boot, Node.js, NestJS, and Kubernetes, enabling robust partner integrations for flight and car rental catalogs.

**Full Stack Developer – Gowdock** | *Apr 2021 – Sep 2022*

- Collaborated directly with founders in an early-stage startup to shape product strategy and engineering roadmaps.
- Engineered end-to-end full-stack solutions for web and mobile, including the development and publication of a mobile app to app stores. Built and maintained microservices using Node.js and MongoDB, and developed the associated dashboard using React, demonstrating high delivery velocity and full-stack ownership.

**Frontend Developer – Seed a Bit (Junior Enterprise)** | *Jan 2020 – Mar 2021*

- Delivered responsive web solutions for corporate clients in a fast-paced collaborative environment.
- Applied industry-standard Git workflows and agile methodologies to develop e-commerce and institutional platforms, building a strong foundation in professional software practices.

## PROJECTS

**Co-Founder & Developer – FalaAgro** | *Jun 2021 – Jan 2023*

- Co-founded an AgTech startup, overseeing the full product development lifecycle (SDLC). Architected and deployed a mobile/web ecosystem using React Native and Node.js/PostgreSQL. Managed technical product strategy, from initial concept to production-ready scalable solutions.

**Personal Project – Zuno** | *Jan 2026 – Present*

- Personal sandbox for exploring and integrating Generative AI into the development lifecycle. Built a localized events platform using Java and React, serving as an experimental environment for autonomous AI agents and automated testing workflows to optimize delivery velocity.

## MENTORING

**Mentor – Porto Digital** | *May 2024*

- Technical and Strategic Mentor for 6 squads (60+ students) in a city government–sponsored innovation program. Provided architectural guidance and product strategy to startups focused on environmental and climate challenges. Mentored teams on agile delivery, engineering best practices, and technical decision-making at scale, strengthening leadership and engineering culture.

## EDUCATION

**Postgraduate Degree in Software Architecture – FIAP, Brazil** | *Mar 2026*

**Bachelor's Degree in Systems Analysis and Development – Uninassau, Brazil** *2024*

## LANGUAGES

**Portuguese:** Native
**English:** Advanced (C1)
